REPORT

OF

THE COMMITTEE OF VISITORS

OF

The West Riding Pauper Lunatic Asylum,

FOR THE YEAR 1857,

Presented at Wakefield Sessions, 5th January, 1858.

Admissions. The admissions during the past	year have been :
Males	156
Females	157
Total	313

Discharges. The discharges:

 Males
 71

 Females
 79

 Total
 150

Deaths. The deaths have amounted to:-

Males 73

Females 46

Total 119

Patients in the Asylum. And the number of patients remaining in the House on the 31st December, 1857, was:—

Males 380

Females 448

Total 828

Increase. Showing an increase on the preceding year, of

Males 12

Females 32

Total 44

Health of Patients.

The health of the patients has been on the whole good, although the mortality shows a considerable increase on that of the preceding year. This increase arises mainly from the large number of admissions, and the enfeebled state of the patients when sent to the Asylum. The Asylum has been free from epidemic diseases during the past year.

Accommoda-

The accommodation provided during the past year has enabled the Visitors to receive all patients on their first application, with few exceptions.

New Building. The newly erected building, contiguous to the laundry, was opened on the 28th September last. This building is capable of accommodating upwards of sixty patients. The Asylum does not at present contain so large a number of patients as it is capable of receiving, owing to two wards in the female department undergoing a complete process of cleansing, painting, and repairing.

Enlargement of the Asylum.

in the manner proposed by the Committee of Visitors, on the 5th March last, were laid before the Commissioners in Lunacy, in June last, when a deputation from the Visitors waited upon the Commissioners, in London. These plans were not approved of by the Commissioners, who recommended the Visitors to erect a new Asylum, of a simple and inexpensive character, in preference to the proposed enlargement. At a subsequent conference with the Commissioners held at the Asylum on the 10th of June last, it was decided not to proceed with the erection of a new wing,

and Mr. Hartley was directed to prepare plans and estimates for a chapel, kitchen, dining room, new workshops, and dormitories, so as to make the present Asylum more complete and commodious. These plans were laid before the Committee at their Quarterly Meeting, on the 29th of October last, and were approved of by them; and Mr. Hartley was requested to forward the same to the Commissioners in Lunacy for their approval.

Improvements. The Commissioners in Lunacy in their last report, suggested several improvements and alterations in the internal arrangements of the Institution, tending to promote the comfort and health of the patients. Some of these suggestions have already been carried out, and the remainder are in progress.

Purchase of additional land.

The Visitors have to report, that during the past year they have purchased, for £600, two acres of land, with a small dwelling-house and other buildings thereon, adjoining to the land purchased some years ago of Mr. Maude, which will be found of great advantage to the Institution.

Increase in number of Attendants.

In consequence of the increase of patients, the Visitors have been obliged to engage ten additional attendants.

Weekly charges.

This increase of attendants, with other augmented expences, compels your Committee to recommend an increase of 6d. to the weekly charge of 7s. 6d. for the maintenance of patients.

Illness of the Director.

At the Quarterly Meeting, on the 10th of June last, leave of absence was granted to Mr. Alderson, the Director, for six months, in consequence of his serious indisposition, and the House Surgeon, Dr. Chapman, was requested to take the management of the Institution. This he has done ever since, with the assistance of Dr. Henry Maudsley, who was appointed House Surgeon, during Mr. Alderson's absence. On the 29th of October last, the Visitors extended Mr. Alderson's leave of absence, to their Annual Meeting, to be held on the 28th of January instant, when they will again take this subject into their consideration.

Officers and Servants.

The conduct of the officers and servants has met with the approbation of the Visitors.

H. W. WICKHAM, Chairman.

Wakefield, 5th January, 1858.

MEDICAL SUPERINTENDENT'S REPORT.

GENTLEMEN,

The whole number of patients who have been in the West Riding Asylum during the past year is 1097. Of these 784 were in the house on the 1st of January, 1857, while 313 have been new admissions. The daily average number resident has been 827.

Of the admissions, the number of which has exceeded that of 1856 by 17, 156 have been males, and 157 females. Forty-one have been cases of re-admission: 22 males, and 19 females. This comparatively large number of re-admissions will be explained by taking into consideration, - first, the property which insanity shares in common with other diseases, the liability, having once occurred, to recur; and secondly, the fact that discharged patients are often, at once on leaving the Asylum, projected into circumstances similar to those which originally produced the disease. H----, a patient, the cause of whose insanity was "religious excitement," was discharged recovered. On reaching home her friends assembled round her in numbers, engaging in earnest and long continued prayer; the consequence of which was, that in a few days she was again admitted as insane from "religious excitement." And this is but a type of what occurs in many other

Re-admissions. cases. The drunkard returns to his drink, and the poor man to his poverty; and ultimately, as a consequence, both to the Asylum.

Discharges.

The number discharged during the year has been 150: 71 males, and 79 females. Of these 130 were discharged recovered, 19 relieved, while one went away unimproved. Several, not completely recovered, were, in the first instance, sent out for a month on trial, where the circumstances of their friends afforded reason for expectation that they would be well cared for; and if at the end of that time they remained in a favourable state, were then discharged. Only two of these returned. It seems, indeed, better to run the risk of sending a harmless patient out a little too soon, than, by long confinement, to make of him a chronic lunatic.

Deaths

The deaths have amounted to 119, making a per centage mortality of 14.38 on the average daily residents. This is two per cent. higher than that of the last two years, though less than in the years preceding 1855. A comparison of the mortality with the yearly admissions shows that it generally increases along with the latter, and diminishes as they diminish. Thus:—

1852....16.25 Mortality per cent....284 Admissions.

185321.26	"	340	,,
185415.44	,,	328	,,
185512.32	,,	265	,,
185612.95	,,	296	,,
185714.38	29	313	,,

Indeed, the comparatively high mortality of this Asylum, seems connected in some measure, with this circumstance,—observation showing that the admissions are great in proportion to the number of patients.

In 1856, indeed, they absolutely exceed in number those of Colny Hatch, with its 1200 patients. But, a far more influential circumstance in commenting upon this mortality, is to be sought for in the extremely depressed and feeble state of bodily health, in which the majority of the patients are found on admission. In truth, this last is the most constant circumstance in the year's history. The depressing causes which have produced the insanity, have, at the same time, broken down the bodily health; those influences which are capable of giving rise to the one, being often as powerful in producing the other. Thus, of the 313 cases of admission, 210 are returned as feeble, 11 as reduced, and 92 only as healthy. And of the 119 deaths, 37 have taken place within three months after admission, 13 of these within one month, 1 in three days, another in four, 1 in a week after admission, and 2 more in a week and three days. Another not insignificant cause will be found in the delay which too frequently occurs before the sufferers are sent to the Institution,—a delay, not attributable, as a rule in humble life, to the unwillingness of friends to part with them, but to the unwillingness of parish authorities to remove them, in the hope that a short period may bring recovery. The histories of patients show that the duration of their insanity, on admission, is counted usually by months, not seldom by years, rarely by weeks, and scarcely ever by days. Thus, of the 313 patients admitted during the past year, no less than 175 exceeded one month in the duration of their insanity on admission; while 64 had actually been insane for periods varying from one to many And of the whole 828 patients in the house vears.

reeble condition on admission. on the 31st of December, 1857, as many as 291 had been suffering from one to many years at the time of admission; while 683 exceeded one month. Meanwhile an exhausting disease, advancing unchecked, is ruining the health. This results, not from the lack of medical treatment only, but from lack of that persevering attention, and constant firmness, which are essential to induce many of the insane even to take nourishment, and which can only rightly be put in effect where the patient loses his individuality in an insane community, and recognizes himself as under rules and regulations against which it is useless to rebel.

Accommoda-

It is a source of satisfaction that the Committee have been under the necessity of refusing but very few applicants for admission. This occurred in the beginning of the year in 11 instances, but most of the cases were afterwards admitted. By placing beds in one of the galleries in the male department, which has bed rooms only down one side, and carpeting the floor, a comfortable and well ventilated dormitory has been obtained, and the accommodation increased to the extent of 13 beds. The few other galleries, so constructed, have been supplied each with a row of tables, so as to enable the occupants of two wards to dine together. The advantage of such an arrangement is apparent. On the female side, some of the huge deep iron baths have been removed, and the rooms in which they were placed, converted into dormitories. The rest are being removed, and when this is completed, an increased accommodation of 36 beds will be obtained. The displaced baths have been turned to account for receiving the condensed water from the engine for the supply of the laundry.

But the most important addition to the accommodation will be produced by the new laundry building. This was opened on the 28th September, and sixty-five patients, most of whom work in the adjacent laundry, are now comfortably settled there. The relief which this will ultimately afford is not yet experienced, in consequence of the female department being in process of painting and thorough repair. We are, necessarily, therefore, deprived of the use of two wards, each capable of accommodating about thirty patients. Still it must be borne in mind that the occupied wards are now inconveniently crowded, and the Commissioners in Lunacy, at their last visit, expressed their opinion that the accommodation which these wards will afford when completed, might be advantageously used in relieving the over crowded building. Thus, the accommodation from the new laundry building, will be felt chiefly as a means of general relief, not as enabling us to receive more patients, except to the number of about five or six.

Besides painting the building devoted to females, Alterations and Improvealterations have been effected in its considerable internal arrangements. Instead of the large iron baths removed, zinc and tile baths have been fixed, and the general usefulness of the bath room increased by an addition to the number of basins for washing purposes. The brick walls in which are the doors at the entrances to the day rooms, are being removed, and their place mostly supplied by windows. This, with the general removal of the window guards, has caused a great influx of light, and materially increased the cheerfulness of the wards. To complete the furniture, and in accord-

ance with the suggestions of the Commissioners in Lunacy, a large addition has been made to the number of pictures and maps, several of which have been framed by the patients themselves. An increase also has been made in the number of tables, chairs, and settees; while bed-side carpets have been added to each of the few rooms in which they were still wanting. Brushes, combs, and looking glasses have been supplied in suitable quantities to the wards, and steps are being actively taken to carry out, as far as practicable, the other recommendations of the Commissioners.

The monotony of the grey dresses has, indeed, been partially dissipated by providing a number of lively print dresses for the females; and adding dark brown jackets and trousers, with a variety of caps, to the wardrobes of the men. A large supply of leather shoes has been obtained, both for males and females, who can now, therefore, at all times leave the wards for the airing courts. The list shoes are still used in the wards. Regard has been had also to the instruction of the patients, in the greatly increased supply of newspapers, periodicals, and other interesting publications, to the various wards.

Amusements. Recognizing, indeed, the fact that amusement forms a most valuable element in the treatment of insanity, advantage has been taken of every suitable occasion in the neighbourhood, to send a number of patients, to avail themselves of the opportunity for recreation. Many were present at Bretton Cattle Show, and the patient who attends to the pigs, as well as the one who has charge of the poultry, were both gratified by exhibiting stock, and by obtaining, respectively, a first

class prize. At the cricket match, between Wakefield and All England, many were present; and a circus in the town, about the same time, was largely patronized by the insane. To both they were kindly admitted at greatly reduced charges. Through the considerate kindness of a friend, several patients were enabled to make a fishing excursion in the neighbourhood, and though their spoil was but small, their enjoyment was exceedingly great. Complete success has also attended attempt to establish a cricket club among the patients, and the long summer evenings were many of them pleasantly spent in this healthy English game. Besides the usual Christmas party,—the actual enjoyment of which is only equalled by the pleasure with which it is looked forward to,—a special entertainment, with dancing, was given on the occasion of opening the new building. The conduct of the patients at these meetings has ever been orderly and creditable in the extreme. The female patients have at all times availed themselves of favourable weather to make short excursions in the neighbourhood,—while the monotony of their indoor life has been relieved by the successful continuation of the school.

A reference to the tables at the end of this report, Employment of patients. showing the number of patients daily employed, will prove that occupation has formed a leading feature in the year's history. Such employment is a positive benefit to the patients, as well as advantageous to the interests of the Institution.

As may be expected in such a large establishment, there have been some attempts at escape, none of which have, however, ultimately proved successful. Those who

Escapes.

venture, generally make their way through the town, and being there recognized, are at once brought back. Three only succeeded in reaching their homes,—one of whom escaped in a manner somewhat ingenious. Having procured the key of an attendant's room, for the purpose of making the bed there, he donned himself in a suit of the attendant's clothes, and quietly let himself out of the ward. So clothed, he passed unrecognized, and scaling the wall, got away. A message was sent to the police, who were waiting for him on his arrival at Huddersfield, and next day he was safely restored.

Accident.

One unfortunate accident stands out from the even progress of events, and marks with black letter a year in every other respect satisfactory. An idiot youth, named Thomas Wild, was brought to an untimely end by being put into a hot bath by another patient, and scalded. He was in a feeble bodily state, and an injury from which a healthy man would have recovered, to him proved fatal. The accident resulted from the attendant having left the key of the bath accessible to the patients. His gross carelessness has since necessitated his discharge.

Attendants.

A comparison of the relative number of attendants and patients in this Asylum with that in others, induced the Committee, at their last meeting, to resolve upon an increase in the staff of attendants. In accordance with that resolution, ten more have been engaged, and the proportion of attendants to patients is now as 1 to 14.

Purchase of land.

As a means of diverting the mind of the patients, as well as a direct pecuniary advantage to the Institution,

a large amount of land is most valuable. The recent purchase made by the Committee will, therefore, be of essential benefit.

It affords me great pleasure to be able to acknowledge the assistance and support, which I have experienced from the various officers of the Institution, who have all been most active in their respective spheres.

In conclusion, I would return my heartfelt thanks to the Committee, for the kindness which they have ever manifested towards me, as well as for the support they have at all times willingly afforded me.

JOHN CHAPMAN, M.D.,

Superintendent, pro. tem.
